

RPA

One Stop Shop for

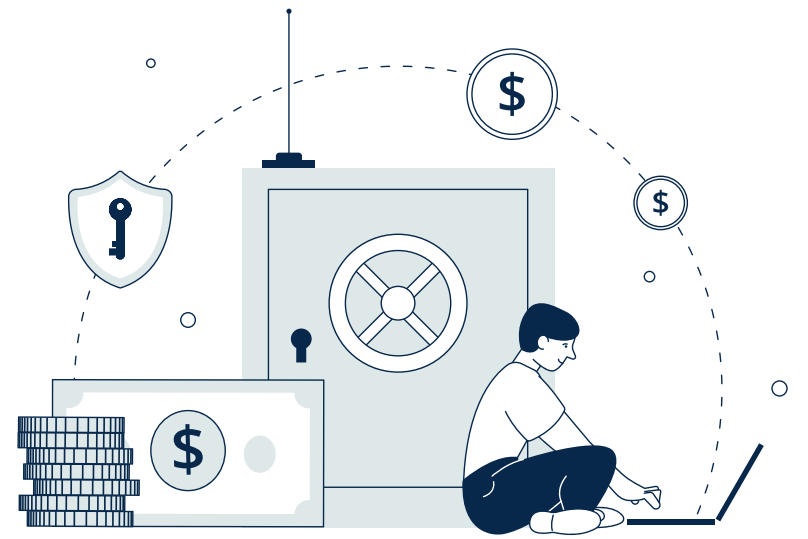

Banking Automation

RPA has been around for a while, but in recent years it has become more popular as it has been shown to be effective at increasing productivity while reducing costs. It's also been shown that companies with RPA implementations see an average 20% reduction in costs and an average 30% increase in productivity.

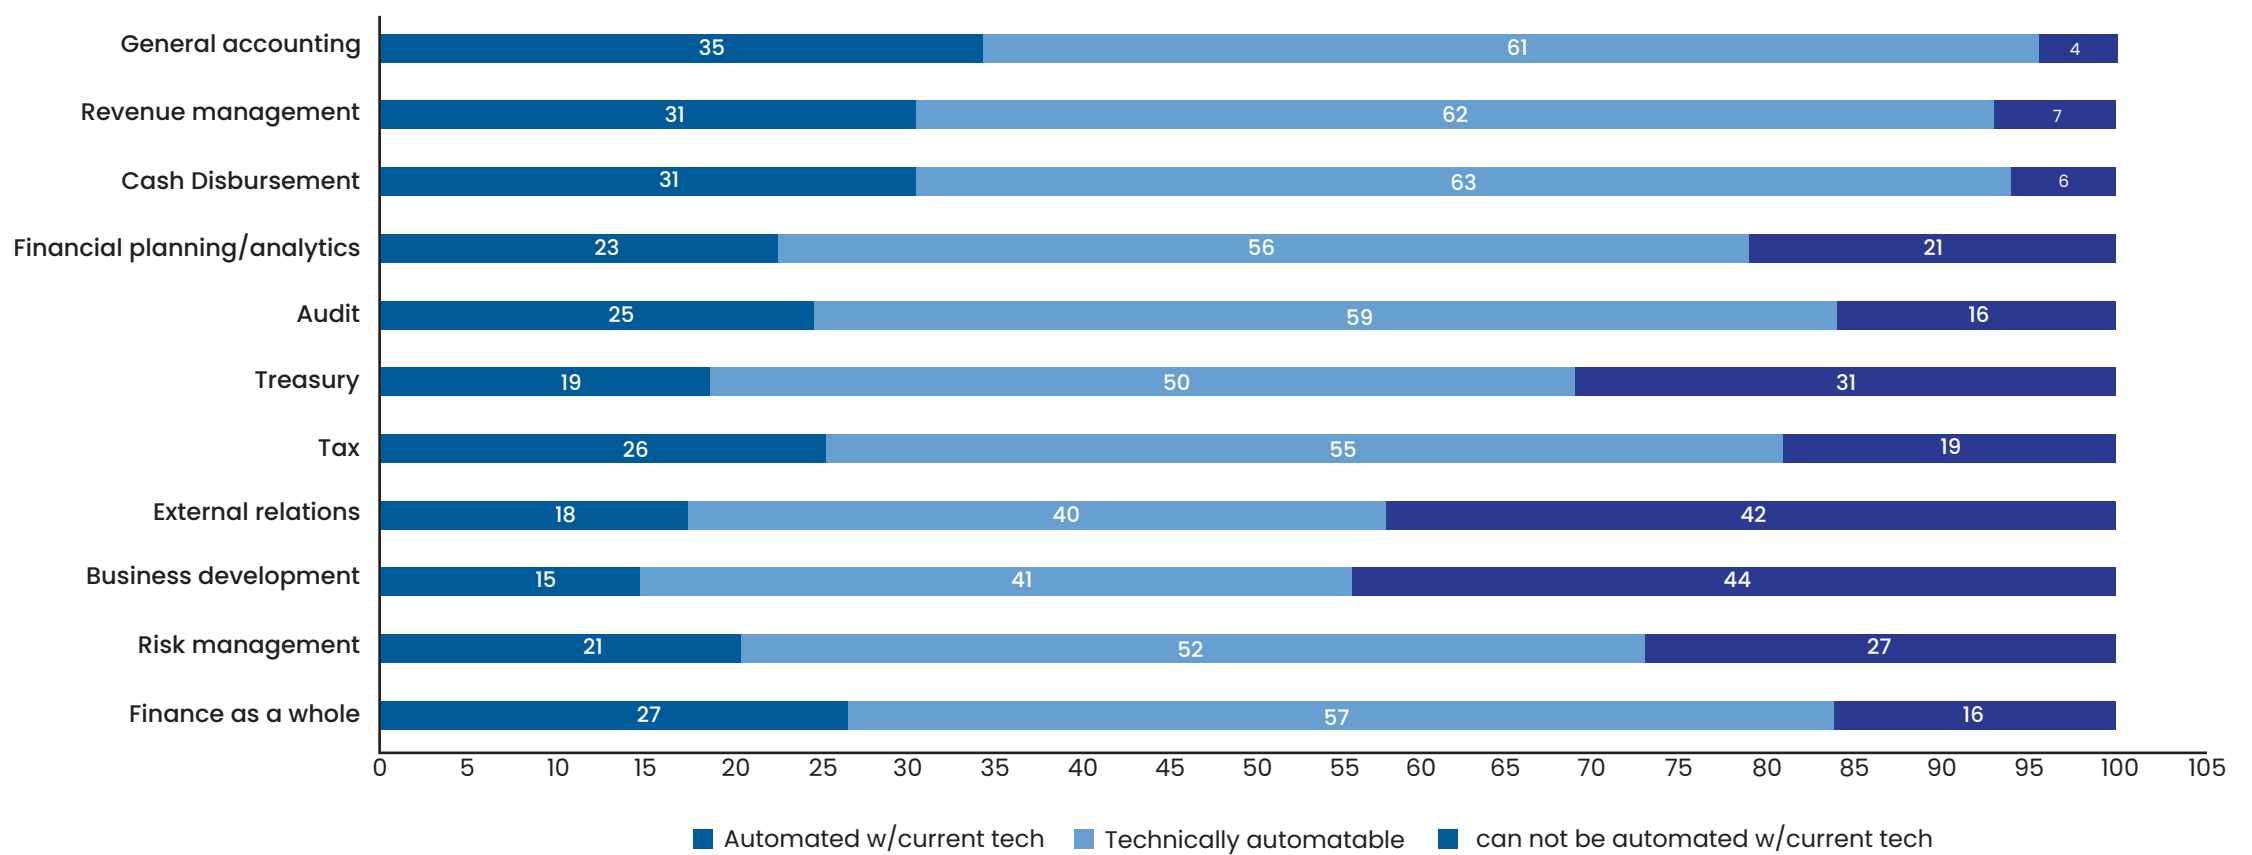

According to McKinsey, general accounting operations have the biggest potential for automation in finance. Business development functions can only be automated up to 56%.
